

UK Shared Prosperity Fund: 3D Modelling & Printing

Subject Type: Construction & Engineering

Course Overview:

Explore the world of 3D modelling and printing by studying this 12-week introductory course. Discover the technology and characteristics of the additive and finishing processes that are needed to successfully manufacture components.

What's Covered:

During this introductory course, our industry-trained teaching team will guide you through the processes and best practice of manufacturing products and components. You will have the opportunity to investigate the design changes required to move from traditional processes such as machining and casting to an additive process.

You will learn skills such as:

- Examining the technology and characteristics of additive processes used in industry
- Investigating component design considerations and finishing processes required for additive processes
- Developing a component safely

At the end of the course, you will have gained the confidence and skills to process and manufacture your own component using a 3D printer.

Entry Requirements:

As this is an introductory course, no formal qualifications are required, although it is advised that learners complete the Introduction to Inventor course prior to enrolment.

Fees and Financial Support:

This course is FREE to adult learners aged 19+ working within this sector.

Progression:

You could progress onto a full Level 4 qualification.

What else do I need to know?

This course will run one evening per week at our brand new Institute of Technology Centre, Castle Street, Stafford.
