

UK Shared Prosperity Fund: Introduction to CNC Machining

Subject Type: Construction & Engineering

Course Overview:

This CNC Machining Course is to support learners who have an interest in this subject and is designed to equip learners with the technical skills and knowledge necessary for careers in advanced manufacturing and precision engineering.

Learners may have completed a previous Engineering qualification and wish to progress onto a higher-level qualifications, or to gain/develop knowledge and skills required to work in industries where there are requirements to utilise industrial software and new technologies of the future.

What's Covered:

During this 10-week course, our team will help you to navigate the basics of CNC Machining to enhance your CV for career progression.

This course offers an introduction to CNC machining, covering fundamental principles and safety aspects.

This course is suited to learners who are looking to begin their CNC machining knowledge or advance their skills further.

This course is fully-funded by the UK Shared Prosperity Fund.

Entry Requirements:

For entry onto this qualification learners must have a keen interest in advanced manufacturing. A background or previous study in an engineering specific qualification may be an advantage.

Fees and Financial Support:

This course is FREE to adult learners aged 19+ already working in this sector funded by the UK Shared Prosperity Fund.

Progression:

This course will support upskilling within your current role, which can then be used to progress into more senior/complex job roles or to support a career change.

This course will support learners gaining employment in the industry of Advanced Manufacturing or to progress onto further study/higher education.

What else do I need to know?

This course will run one evening per week at our brand new Institute of Technology Centre, Castle Street, Stafford.
